ADDITIONAL DESCRIPTION

DRAINAGE & SITE NOTES

Surface drainage. Surface drainage upon and across any lot must be carefully considered. Existing points of entry and exit to and from a lot by historic surface drainage must be respected. Any improvement that creates an obstruction to surface flows resulting in a back-up or concentration of storm waters onto a neighboring lot or tract is strictly prohibited.

Ground floor levels. Ground floor levels should be established at a vertical elevation such that final placement of backfill, walks, driveways and porches will produce positive drainage away from the structure in all directions.

Subsoil and ground water. Subsoil conditions and ground water levels vary dramatically throughout Johnson County. Consultation of a professional soils engineer for assessment of foundation design determinants and depth to ground water is advised for all sites within the Town of Kaycee. Basements may be ill-advised on some low-lying, wetter sites, and sump pumps should be incorporated into the design of below-grade living spaces. Foundation waterproofing and a perforated pipe foundation drainage system are recommended along uphill and side-hill foundation walls on hillside lots.

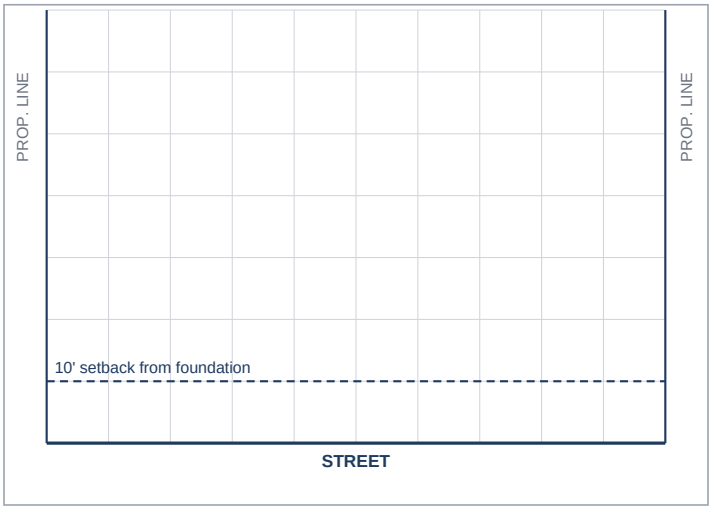

Front yard set back from property line

Side yard set back from property line
